Dear Colleagues and Friends,

Welcome to the 28th Annual Meeting of the North American Skull Base Society!

The Program Committee has put together a most impressive array of pre-courses, keynote lectures, panels, hot topics, debates, video sessions, and proffered paper sessions. I want to thank each and every member of our Program Committee for their enormous contributions to the success of this meeting and especially to our two Program Co-Chairs, Dr. Zoukaa Sargi and Dr. Amir Dehdashti who have worked tirelessly to make this a great educational meeting.

The BSC Management team has done a spectacular job in organizing this meeting and keeping us all on target. I am also very grateful to Dr. Perry Mansfield who was so helpful with local arrangements.

The main theme of the meeting: Dynamic Mentoring of the Skull Base Surgeon: Training our Future is about the current and next generations of physicians and allied health professionals who will manage skull base disease. All of us have had mentors who have helped shape our careers. My hope is that we all learn more about what makes a great mentor/mentee relationship and how all of us can “pay it forward”.

The pre-courses include a Hands-On Course led by Drs. James Evans and Ricardo Carrau, a Meningioma Education Day led by Drs. Gelareh Zadeh and Ian Dunn and a Skull Base Primer Course led by Drs. Eric Monteiro and Scott Wait. The meningioma theme will continue on the first day of the main meeting. On the last day, we will have a Pituitary Forum in conjunction with the International Society of Pituitary Surgeons.

A new feature this year is The Rhoton Room covering specific anatomical areas starting with 3D anatomy followed by pertinent diagnostic imaging along with and then two teams of surgeons performing simultaneous dissections on cadaveric specimens with commentary. Day 1 (February 16th) will feature open procedures, Day 2 (February 17th) will feature endoscopic procedures and Day 3 (February 18th) will feature temporal bone and neck anatomy plus radiology (no dissections).

There will be an opportunity to test your skills in stopping carotid bleeding with Carotid Bleeding Simulators. We will have a Three Minute Thesis competition on Saturday February 17th. Ten of the top scoring abstracts will participate in a contest where the presenters will have three minutes and one slide only to describe their work (1st, 2nd and 3rd place prizes will be awarded). There is also a resident and fellow skull base trivia “Jeopardy” contest on February 17th in the afternoon.

I have invited three of my mentors as Guests of Honor; these are Dr. Patrick Gullane (University of Toronto), Dr. Fred Gentili (University of Toronto) and Dr. Peter Neligan (University of Washington). Dr. Gentili was an honored guest at last year’s meeting but he has played such an important role in my career, I had to invite him back. These three surgeons, representing head and neck oncology, neurosurgery and plastic surgery respectively, have all been instrumental in shaping the lives of so many “mentees”, including myself, and have had a profound influence on skull base surgery in North America.

In addition, Dr. Robert Miller who just stepped down as the Executive Director of the American Board of Otolaryngology will talk about networking and career development. Dr. Dan Fliss from Israel will give us an overview of skull base surgery in the 21st century and Dr. Harry van Loveren will give us his insights on knowing when and how to “hand over the scalpel” to residents and fellows. Mr. David DeLong will give us a keynote lecture on February 17th on Making Experience Pay Off: Maximizing the Value of mentoring.

The Research Committee led by Drs. Anand Devaiah and Shaan Raza have vetted over 40 research applications for new funding awards approved by the NASBS Board. The winners will be announced at the annual meeting as well as winners of awards from submitted manuscripts in three categories (basic science, clinical science and international). We will also be announcing an exciting endowment and the creation of the NASBS Foundation to support research and education going forward.

I want to thank the fellowship programs and individuals who generously supported the 2018 NASBS International Travel Scholarship. With their support, we were able to fund four awards to allow Dr. Anthony Thomas (South Africa), Dr. Idoya Zazpe (Spain), Dr. Hermantkumar Nemade (India) and Dr. Olli-Pekka Kamarainen (Finland) to attend this meeting. Please join me in welcoming these four colleagues.

I hope you enjoy the resort and the surrounding beauty of the Coronado peninsula. You will have down time and fun time to catch up with friends and colleagues. We will have a Welcome Reception, poster viewing and poster tours on Friday night. On Saturday night, we are planning a New Members Reception followed by a “Beach Blowout” on Silver Strand Beach, a short walk from the Loews Coronado.

The interest in our society is strong and growing. The Membership Committee under the leadership of Dr. Madison Michael has done another outstanding job in showcasing our society with more than 120 new applications to join the NASBS this year. We have had record attendance (exceeding 700 attendees), sponsorship and abstract submissions for this meeting. The future of the NASBS looks GREAT!

Thank you for allowing me to serve as your President; it is an honor and privilege. I sincerely hope you find this meeting and all of its components exceed your expectations.

Relax, enjoy, connect and learn!

NASBS President 2017-2018

Disclosures

In accordance with the ACCME Accreditation Criteria, the American College of Surgeons, as the accredited provider of this activity, must ensure that anyone in a position to control the content of the educational activity has disclosed all relevant financial relationships with any commercial interest. Therefore, it is mandatory that both the program planning committee and speakers complete disclosure forms. Members of the program committee were required to disclose all financial relationships and speakers were required to disclose any financial relationship as it pertains to the content of the presentations. The ACCME defines a ‘commercial interest’ as “any entity producing, marketing, re-selling, or distributing health care goods or services consumed by, or used on, patients”. It does not consider providers of clinical service directly to patients to be commercial interests. The ACCME considers “relevant” financial relationships as financial transactions (in any amount) that may create a conflict of interest and occur within the 12 months preceding the time that the individual is being asked to assume a role controlling content of the educational activity.

ACS is also required, through our joint providership partners, to manage any reported conflict and eliminate the potential for bias during the activity. All program committee members and speakers were contacted and the conflicts listed below have been managed to our satisfaction. However, if you perceive a bias during a session, please report the circumstances on the session evaluation form.

Please note we have advised the speakers that it is their responsibility to disclose at the start of their presentation if they will be describing the use of a device, product, or drug that is not FDA approved or the off-label use of an approved device, product, or drug or unapproved usage.

The requirement for disclosure is not intended to imply any impropriety of such relationships, but simply to identify such relationships through full disclosure and to allow the audience to form its own judgments regarding the presentation.

WEDNESDAY, FEBRUARY 14 & THURSDAY, FEBRUARY 15, 2018
UCSD Center for the Future of Surgery

The pre-meeting dissection workshop of the 28th Annual NASBS Meeting offers participants with hands-on cadaver dissection sessions and didactic sessions. Modules will take participants through open and endoscopic exercises to the central, lateral, and posterior skull base. The two-day cadaveric course is to promote anatomical understanding and practice of complex approaches to the skull base. Where possible different approaches to the same region will be employed with the benefit of contrasting and comparing the achieved exposure.

COURSE OBJECTIVE: Two-day cadaveric course to promote anatomical understanding and practice of complex approaches to the skull base. Where possible, different approaches to the same region will be employed with the benefit of contrasting and comparing the achieved exposure.

Malignancies involving the lateral skull base are considered rare. They comprise of advanced skin cancers involving the ear or preauricular skin; advanced parotid cancers involving the ear or temporal bone; cancers of the external and middle ear; and cancers involving the infratemporal fossa and temporomandibular joints. As treatment may involve specialized surgical resections, reconstruction and radiotherapy, multidisciplinary treatment approach should be provided to patients diagnosed with LSBM.
